SPECIAL LIGHT

**PATRIK FREDRIKSON
& IAN STALLARD**
Founders of Fredrikson Stallard
and Designers for Swarovski

In creating the the Glaciarium collection, the designers were inspired by watching Swarovski's complex crystal production techniques and the behaviour of the material in its raw state. The series of objects includes chandeliers and components as well as vases, bowls, and candle-holders for Swarovski's latest incarnation, Atelier Swarovski Home, launched in 2016.

Fredrikson Stallard commented: "There's always a balance in our work between the sense of something that has been made and something that has been found, and that's what we refer to as effortlessness. This is a collection of functional objects with a sculptural aesthetic. They are studies of the relationship between natural and synthetic, geometric and organic, analogue and digital, sculptural and industrial, one-off and multiple."

**MARTIN VIDEGÅRD
& BOLLE THAM**
Architects and Founders of
Tham & Videgård Arkitekter

Wästberg has launched a family of lamps called w171 alma, developed in collaboration with Swedish architects Tham & Videgård. "The starting point for w171 alma is the creation of a clear design built on the concept of circles of soft sine waves, diffusing light in delicate way. The shape is based on a continuous round wave, where light is created out of the satin matte finish. The lamp was originally developed for a brand new co-working project in Stockholm called Alma." It can be installed on its own or in a cluster, generating patterns of floating points of light. Due to its slim silhouette, w171 alma can be mounted directly on the ceiling or wall, or suspended freely.

1. LENSVELT

Bulbs is a range of hand-blown lighting objects created by artist **Caroline Prisse**, director of Van Tetterode Glass Studio. Presented at the Lensvelt Gallery in Amsterdam in September 2016, the Bulbs lamps are not perfectly spherical, and each has a handmade dimple. Available online from Lensvelt.
